Reading Mode looks like an open book, however, all the free books on the Read Print site are divided by chapter so you'll have to go back and open it every time you start a new chapter.

Answers To Penny Lab

Drops On A Penny Lab Cohesion Water molecules are attracted to other water molecules. The oxygen end of water has a negative charge and the hydrogen end has a positive charge. The hydrogens of one water molecule are attracted to the oxygen from other water molecules. This attractive force is what gives water its cohesive properties.

Analysis Of A Penny Lab Answer Key

Once the water has reached the edge, you begin to see a bubble or dome of water forming on top of the penny. The bubble shape is a result of the water molecules clinging to one another in an optimal shape (just like the bonds on the surface of a blown bubble).

Drops on a Penny | Experiments | Steve Spangler Science

molecules. When plain water is dropped on a penny, water molecules strongly attract one another and. the resulting surface tension is high. This is observed by the bubble-like shape formed by the water as more drops are added to. the penny's surface.

Water Drops on a Penny - Flinn

The Hollow Penny Introduction Pennies are made of copper, aren't they? The outside is certainly made of copper, but that's not the whole story. Before 1982, pennies contained about 95% copper and 5% zinc. After 1982, however, the composition of pennies was changed to contain mostly zinc and only a small amount of copper. In this activity,

The Hollow Penny
