### Baseline Noise Measurements, 2008

Measuring noise levels and workers' noise exposures is the most important part of a workplace hearing conservation and noise control program. It helps identify work locations where there are noise problems, employees who may be affected, and where additional noise measurements need to be made.

### Noise - Measurement of Workplace Noise : OSH Answers

The OSHA PEL for noise is 90 dB(A) as an 8-hr TWA based on a 5-dB exchange rate. Occupational standards specify a maximum allowable daily noise dose, expressed in percentages. For example, a person continuously exposed to 85 dB(A) per NIOSH or 90 dB(A) per OSHA over an 8-hour work shift, will reach 100% of their daily noise dose.

measurement for that purpose. Personal noise measurement involves a small device called a noise dosimeter. Workers can wear the device to determine their average noise exposure over a whole shift. The dosimeter has a microphone that is placed as close to the worker's ear as possible. Noise measurements should be carried out in accordance with acceptable standards. Canadian Standards Association (CSA) Standard Z107.56:
