The realization of materials that undergo reversible, thermally controlled, spontaneous magnetization switching (reversible TCMS) in the absence of an external magnetic field may pave the way for the development of next-generation devices such as thermal writing memory devices and sensors. 1 1. Y.

Reversible thermally controlled spontaneous magnetization ...

Ferromagnetism is a form of magnetism that can be acquired in an external magnetic field and usually retained in its absence, so that ferromagnetic materials are used to make permanent magnets. A ferromagnetic material may therefore be said to have a high magnetic permeability and susceptibility (which depends upon temperature).
