Honors Chemistry - Atomic Structure Quiz - Quizizz

The melting point of sugar is lower than that of common salt. What type of bonding can you predict for each compound? One could predict that sugar would produce a covalent, because a low melting point is a reoccurring characteristic of covalent bond and table salt would be an ionic bond, because it has a high melting point which is a reoccurring characteristic of an ionic bond.

Honors Chemistry: Chemical Bonding Test Flashcards | Quizlet

Chemistry is a branch of physical science that studies the composition, structure, properties and change of matter. Chemistry deals with such topics as the properties of individual atoms, how atoms form chemical bonds to create chemical compounds, the interactions of substances through
