Online Library Liquid Ring Vacuum Pumps Compressors And Systems By Helmut Dammwirth

ring compressors are compressors in which a liquid ring formed from the service liquid serves to transmit the energy required for the compression of gases and vapours. The medium being pumped comes into contact with the service liquid, thus allowing these media to affect each other.

rotary vane pump, with the difference being that the vanes are an integral part of the rotor and churn a rotating ring of liquid to form the compression-chamber seal. They are an inherently low-friction design, with the rotor being the only moving part. Sliding friction is limited to the shaft seals. Li

Liquid ring vacuum pumps normally operate with water as the operating medium. An eccentrically installed impeller rotates in the casing partly filled with liquid. By the rotational movement of the impeller and the resulting centrifugal force the liquid within the cylinder forms the so-called liquid ring. Gas is conveyed in the spaces between
