Mac Pro 3 1 Service

The Mac Pro, in most configurations, is the fastest computer that Apple offers, and is one of three desktop computers in the current Macintosh lineup, the other two being the iMac and Mac Mini. It was first released in 2006, replacing the PowerMac G5 series of computers. The first Mac Pro was based on dual Dual-core Xeon Woodcrest processors.

Mac Pro Repair - iFixit

On previous Mac Pro models, the serial number is printed on the computer's back panel, below the video ports. It's also on the original packaging, next to a barcode label. You can then enter that serial number on the Check Coverage page to find your model.

Identify your Mac Pro model - Apple Support

This firmware upgrade for all intents and purposes makes your 2009 Mac Pro into a 2010 Mac Pro. Before getting started, you'll want to see if you are already at the latest firmware revision possible for your Mac. On your macOS desktop click . Select About This Mac. Click System Report....

How to upgrade your older Mac Pro firmware | iMore

Assuming that it is definitely a Mac Pro 3,1 (i.e. early-2008 Mac Pro model), the logic board should contain some diagnostic LEDs. These were used by technicians for troubleshooting purposes, so you may be able to leverage off these to isolate your problem. The following chart explains each LED: As you can see, normally LEDs 3, 4, 5, and 6 are off.

The Mac Pro 3,1 [Early 2008] Can quite happily run the current OS X - at time of writing El Capitan 10.11.3. I have one here running just that. As of Sierra, 10.12, the above still remains true, yet further clarified - El Capitan is the final OS to support the 3.1 [& indeed 4.1 unless it has been firmware updated to 5.1]
