### Object Oriented Programming With C

Overview. Programming languages like C++ and Java have built-in support for OOP concepts. However, did you know that you don't need to use an OOP language in order to use OOP style and get some of the benefits of object-oriented programming? In this tutorial, I will explain how we can bring some of the style of object-oriented programming to C, a language without built-in OOP support.

### Object-Oriented Programming (OOP) in C | Codementor

Object-oriented programming has several advantages over procedural programming: OOP is faster and easier to execute. OOP provides a clear structure for the programs. OOP helps to keep the C# code DRY "Don't Repeat Yourself", and makes the code easier to maintain, modify and debug.

### C# OOP (Object-Oriented Programming)

C# provides full support for object-oriented programming including abstraction, encapsulation, inheritance, and polymorphism. Abstraction means hiding the unnecessary details from type consumers. Encapsulation means that a group of related properties, methods, and other members are treated as a single unit or object.

### Object-Oriented Programming (C#) | Microsoft Docs

My take is that doing object-oriented programming C is really doing struct-oriented programming. However, you can achieve things like late binding, encapsulation, and inheritance. For inheritance you explicitly define a pointer to the base structs in your sub struct and this is obviously a form of multiple inheritance.

C programmers have been using something like object oriented programming for years. They called it good modularity. The classic example of "object-oriented C" is the standard FILE structure and its family of functions fopen, fclose, fread, fwrite, fprintf, etc. Only the "methods" of the file object, fopen etc., access the members of FILE.

### Introduction to Object Oriented Programming Concepts in C#

The prime purpose of C++ programming was to add object orientation to the C programming language, which is in itself one of the most powerful programming languages. The core of the pure object-oriented programming is to create an object, in code, that has certain properties and methods. While designing C++ modules, we try to see whole world in the form of objects.
