Pro SQL Server 2008 Replication: Paul, Sujoy ...

Setting up Transactional Replication in SQL Server 2008 R2. Replication is one of the High Availability features available in SQL Server. Transactional Replication is used when DML or DDL schema changes performed on an object of a database on one server needs to be reflected on the database residing on another server.

Setting up Transactional Replication in SQL Server 2008 R2 ...

There are four MS SQL Server replication types: snapshot replication, transactional replication, peer-to-peer replication and merge replication. Snapshot replication This replication type can be used when data is changed infrequently; when it is not critical to have a database replica that is older than a master database; or a large volume of changes is made within a short period of time.

SQL Server Replication: Full Overview and Step-By-Step ...

Pro SQL Server 2008 Replication - SQL Server book ...

It begins with an introduction to distributed data, distributed data transactions, eager replication, lazy replication, replication in SQL server, and the benefits of replication. The book then covers replication basics including the published-subscriber model, the different components of replication, physical replication models, and installing and configuring replication.

Amazon.com: Customer reviews: Pro SQL Server 2008 Replication

Microsoft System Center Management Pack for SQL Server 2008 Replication enables monitoring of Replication as a set of technologies for copying and distributing data and database objects from one database to another and then synchronizing between the databases to maintain consistency.

Microsoft System Center MP for SQL Server 2008 Replication

I mean I want a scheduled task to run and copy all the contents from the msqldb to the sql server 2008 db once a week or so - is that possible? ... Transactional replication from SQL Server 2000 to 2008. 2. Moving SQL server 2008 to a new Server with all DBs, replication and Jobs. 3.

Replicating a remote MySQL database to MS SQL Server 2008 ...

This change happens within a fraction of a second. In this article, I will demonstrate the step-by-step approach to configuring snapshot replication in SQL Server 2008 R2. There are three Musketeers of replication and you will become familiar with them in this series of replication. These Musketeers are shown below: 1. Publisher 2. Subscriber 3.

Snapshot Replication in SQL Server 2008: Part 1

In addition, peer-to-peer transactional replication can be a substitute for an "updatable subscription for transactional replication" since updatable subscriptions are a deprecated feature in SQL Server 2008. For more info refer to this link. Next Steps. Overview of Peer-to-Peer Transactional Replication - SQL Server 2008 from MSDN.

Overview of Peer-to-Peer Transactional Replication in SQL ...

As you say yourself, the SQL Server Web Edition does not support replication. So basically you could a) find yourself a new hoster that supports other editions of SQL Server so you can use replication, or b) you could write your own "replication"-like functionality in T-SQL or other code. - marc_s Sep 28 '11 at 12:42

Replication with SQL Server 2008 Web edition - Stack Overflow

In this tip, I cover SQL Server 2008 High Availability options that are available out of the box. Solution. There are 4 High Availability options in SQL Server 2008 that we will cover; Failover Clustering, Database Mirroring, Log Shipping and Replication. Each one has its own features and benefits.
